BAND KNIFE MACHINE VACUUM CLEANING SYSTEM PS-220

The PS-220 was designed for dust removal from the tabletop of the band knife machine. It is highly recommended to use when cutting knitwear, silk, and other fabrics that create a lot of dust when they are cut. Thanks to this system, one can prevent the scraps of fabric to get into the construction of the machine, especially in the band machines that are equipped with an airflow. Thanks to this cleaning system, you can expect to make less brakes for machine maintenance. Each Rexel band knife machine (except R500) system is equipped with an extension that allows to attach the PS-220 so that it can be added at any time.
