PNEUMATIC LIFTING TABLE FOR UPHOLSTERY ST-5 KD BB

This table is a special version of the ST-5 model. It is designed for companies that have limited factory space or produce small furniture pieces. All pneumatic components of this table are protected with metal covers, so the table can be used for gluing. A hydraulic two-way anti-bounce brake system helps prevent the table from bouncing. The tabletop is specified individually. In standard ST-5 KD BB is supplied without tabletop.

Key features:

- Solid construction based on steel profiles and a pneumatic cylinder.
- The pneumatic cylinder is foot-controlled.
- The table has a connection port for pneumatic tools.
- After turning the table off, it locks automatically (disconnecting compressed air does not cause the table to collapse).
- It has been proven that using our lifting tables reduces energy use by 15% compared to upholstery trestles.
- An increase in productivity of at least 14% has been observed when employees use our lifting tables instead of regular upholstery trestles.

Specifications:

Model: ST-5 KD BB
Working pressure: 6 bar (87 PSI)
Top frame dimensions: 995 × 795 mm (39.17" × 31.30")
Pneumatic cylinder: D100 × 500 mm
Minimum height: 630 mm (24.80")
Maximum height: 1250 mm (49.21")
Maximum load: 70 kg (154.3 lbs)
