VERTICAL CURTAIN CUTTING MACHINE UCF-2

Key features:

- The device is based on the WK-2HD inspection hoist and is used for measuring and cutting curtain materials to the desired length.
- The material is secured with TYP-11 clamps to the upper arm, which is raised to the desired height using a foot control system.
- Material is cut manually with a hand cutter OT-1/R.
- A manual fabric clamp holds the material in place with magnets.
- Touchscreen control panel.
- The machine is equipped with an encoder. After setting the desired height and pressing the pedal, the movable upper arm moves to the set height. This allows precise adjustment of the material cutting length.

Technical specifications:

- Voltage: 1-phase, 230V 50-60 Hz
- Power: 1200 W
- Maximum height: 5200 mm (204.72")
- Maximum material width: 4000 mm (157.48")
- Maximum load capacity: 50 kg (110.23 lbs)

* Custom dimensions available on request.
** To ensure safety the machine has to be anchored to the floor using floor anchors.
